How to Use Epson 10000XL Scanner with Silverfast for negative sheets

1. Open the lid of the scanner and take the white foam off the inside of the lid.

2. Place the plastic negative sheet an inch from the left edge of the scanner glass. An arrow along the top will indicate the correct placement.

3. Click the icon on the desktop. Then, select Silverfast Application > SF Universal Launcher. If prompted, select continue to Silverfast.

4. In the NegaFix drop-down window, click the Expert Settings button.

5. Click the Expansion tab.

6. Make sure the Auto box is checked.

7. Click the zoom button to zoom in. Make adjustments to your image as instructed by your professor. Then, click the zoom button again to zoom out.

8. Click the mouse on the image and drag the + cursor across a single negative strip to scan.

9. Select 16 > 8 Bit B&W

10. Enlarge size of your selection box to include all the negatives by dragging the edges with the cursor.

11. Click the Prescan button.

12. Click Scan.
